

Ventilated garret solin OPTI-M48

Complicated architecture of roofs with attics can sometimes impede proper ventilation. It is common for the air entering the soffit to not enter the roof. As a result this fails to provide proper ventilation. Our attic solin comes in part from 48" and settles between the upper part of the roof with a gentle slope and the lower part of the roof with a very steep slope.

Advantages

- Very discreet and aesthetic
- Protects against infiltration
- Prevents rot and mold
- Provides proper ventilation by keeping the roof temperate
- Allows heat and condensation to escape through the conventional vent
- The discreet design of the attic solin offers a beautiful finish
- Simple to install

Colours

Standard colours available: brown, grey, black and charcoal. Other colours available on special order (additional fee).

Norms

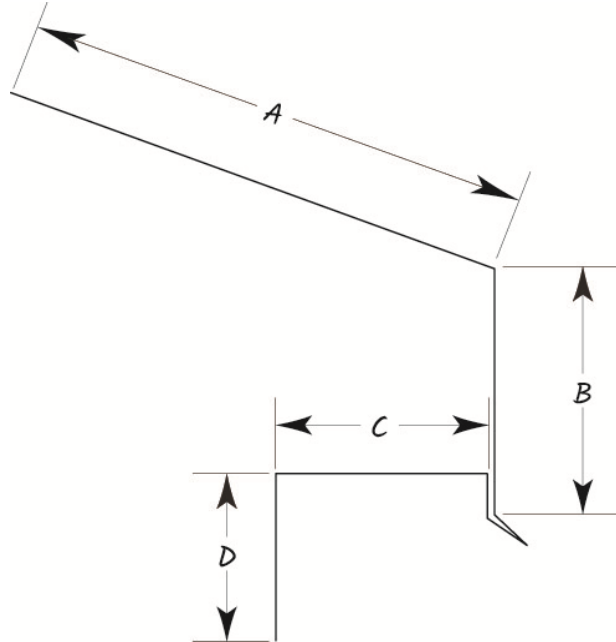

CSA Certified
The National Building Code requires adequate ventilation of the roof as per the minimum standard of Section 9.19.1 or according to the ACNOR CAN3-A93-M82.

Use

Ventilation is required by the Canadian Building Code. A good ventilation means keeping the attic space near the outside temperature to avoid excessive contrasts. With the help of soffits, for example In summer, the chimney effect created by the Optimum ventilator eliminates excess heat from the attic and thus helps maintain the integrity of the asphalt shingles. In winter, you will get a drier attic. No matter what the season, Optimum Ventilators will help to optimize the comfort of your home!

Characteristics

The vent is manufactured from galvanized steel followed by a specialized baked paint finish.
